Abstract of JP2000149405

PROBLEM TO BE SOLVED: To make executable synchronous reproduction, etc., of read and write of management information or plural contents with a little throughput at the time of accessing, from an external device, AV data stored in a storage medium and the management information of the data attached thereto.

SOLUTION: An audio list 201 is constituted of a pointer 222 to a title, a pointer 323 to text file information, etc. Link information to a 1st object 233 of a title list 231 is described in the pointer 222 to the title. Moreover, in the pointer 323 to the text file information, link information to a 1st object 353 of a 2nd text file list 351 is described. Configuration of such a list structure facilitates an access from an external device.
